

ProofFund

AI-Governed Autonomous Grant Markets

Verified by Sourcify · Governed by AI · Portable via ENS

Abdulaziz Ismoilov · Alisher Laiyk · Kseniia Kushnir · Damir Alenov · Rustamov Farukh · Shakhzod Bakhadirov

| GRANT ACCOUNTABILITY GAP

Web3 grants are slow, subjective, and often release capital before delivery is proven.

Funders struggle to verify whether developers have real smart-contract experience, and whether requested funding is tied to measurable on-chain outcomes.

⚠ Subjective Bias

Committee decisions are often disconnected from technical ground truth.

⌘ Zero Accountability

Funds are released upfront with no objective mechanism for milestone verification.

🔍 No Developer Reputation Layer

Funders cannot easily verify whether an applicant has real smart-contract experience.

AGENTIC GRANT WORKFLOW

Sourcify Audit

Technical ground truth via BigQuery analysis of wallet deployment history and code quality.

AI Milestone Engine

LLM agents convert proposals into measurable, on-chain KPIs for automated resolution.

ENS Reputation

Earned reputation badges stored in project subdomains, visible across the Ethereum ecosystem.

STEP 1 - WALLET-BASED IDENTITY

Connect Wallet

Wallet Login

The developer connects an Ethereum wallet instead of creating a password-based account.

Sign Out

 **Ethereum** ▼

 **0x6C...2365** ▼

Verified Ownership

The wallet signature proves that the user controls this address before they can submit a grant request.

Connect a Wallet

Popular

 **MetaMask**
Recent

 **Rainbow**

 **Base**

 **WalletConnect**

What is a Wallet?

A Home for your Digital Assets

Wallets are used to send, receive, store, and display digital assets like Ethereum and NFTs.

A New Way to Log In

Instead of creating new accounts and passwords on every website, just connect your wallet.

Get a Wallet

⚡ GRANTS DISTRIBUTED
0 ETH

Structured Funding Request

Developers submit the core project data needed for automated review:

project name, GitHub repository, description, funding amount, milestones, deadlines, and on-chain KPI conditions.

This form becomes the input for the AI agent and the grant market workflow.

LAUNCH YOUR ROADMAP

Define your goals, set on-chain KPIs, and let the market fund your vision.

STEP 2 - SOURCIFY GROUND TRUTH

Developer Reliability Audit

We use Sourcify verified contract data to evaluate whether the applicant wallet has real smart-contract history.

BigQuery lets us analyze verified deployments, code quality, metadata, documentation, activity, and security signals across chains.

The output is a trust score and verdict used by the next AI workflow.

Sourcify Reliability Audit

TOTAL SCORE

0.671 / 1.000

Verified Contracts ①

0.150 / 0.15

↳ 30 contracts (4 production)

Verification Quality ①

0.142 / 0.25

↳ Weighted match quality: 0.57

Documentation ①

0.046 / 0.20

↳ Doc quality: 0.23 (devdoc/userdoc/storage)

Activity History ①

0.138 / 0.15

↳ 1.7yr span, last 6mo ago

Complexity & Multichain ①

0.095 / 0.15

↳ Complexity: 0.40, chains: [1, 8453]

Security Patterns ①

0.100 / 0.10

↳ Clean - no dangerous patterns

STEP 3 — UMIA AGENTIC PROJECT EVALUATION

Umia Agentic Engine

The agent turns a grant proposal into executable funding logic. It reviews the project, checks feasibility, generates measurable KPIs, and prepares the market and verifier contracts needed for milestone-based funding.

Roadmap Assessment

CONFIRM VOTE

Market-Based Milestone Voting

Traders stake real capital on whether the developer will complete a specific milestone.

Each milestone has a YES/NO market. If the market supports the project, the first funding tranche is unlocked. Later, the final outcome is resolved by on-chain KPI verification.

| STEP 5 - ENS AS THE TRUST LAYER

project1.prooffund.eth

Verified Badge

The ENS name becomes a **live reputation object**. Text records are updated dynamically during the build window.

- ✓ **Trust Score:** Latest Sourcify audit.
- ✓ **KPI Status:** Real-time delivery progress.
- ✓ **Funding:** Current tranche state.

ENS AS THE TRUST LAYER

ENS

When a project passes the decision stage, ProofFund mints a dedicated ENS subdomain to the developer wallet.

This subdomain acts as a public reputation badge and stores live project state: trust score, KPI status, funding progress, and market references.

Instead of reputation staying inside our app, it becomes portable Web3 identity.

ENS L2 Registry

Autonomous subdomains for verified grant recipients

RECENT REGISTRATIONS

STEP 6 - ON-CHAIN KPI VERIFICATION

Milestone Outcome Check

After the development window ends, ProofFund verifies whether the developer actually completed the promised milestone.

The KPI verifier checks predefined success conditions generated during the AI assessment stage: on-chain activity, contract state, repository progress, usage metrics, and other measurable delivery signals.

The result is written as a clear binary outcome: KPI MET or KPI FAILED.

This outcome becomes the source of truth for the final market settlement.

STEP 7 - AUTOMATED SETTLEMENT & PAYOUTS

ECOSYSTEM ROADMAPS

Stake on specific milestones of tier-1 projects. Verifiable on-chain execution.

Uniswap V4

uniswap.org

The largest decentralized exchange. Betting on the successful rollout of V4 Hooks ecosystem and specific TVL milestones.

ACTIVE ROADMAP GOALS

Deploy V4 Core on Ethereum Mainnet

YES 88% x8.50

NO 12% x1.13

Pool: 170.00 ETH

Reach \$1B TVL in V4 Pools

YES 45% x1.82

NO 55% x2.22

Pool: 100.00 ETH

Aave GHO

aave.com

Decentralized stablecoin by Aave. Markets are focused on peg stability and cross-chain expansion.

ACTIVE ROADMAP GOALS

Launch GHO natively on Arbitrum

YES 89% x9.00

NO 11% x1.13

Pool: 90.00 ETH

Maintain \$1.00 Peg for 30 consecutive days

YES 43% x1.75

NO 57% x2.33

Pool: 70.00 ETH

Lens Protocol

lens.xyz

Web3 social graph. Tracking developer adoption and active user metrics for their new Appchain.

ACTIVE ROADMAP GOALS

Release Lens Appchain Public Testnet

YES 83% x6.00

NO 17% x1.20

Pool: 30.00 ETH

Deploy V4 Core on Ethereum Mainnet

AI Verified Official Site Deadline: Nov 30, 2026

CURRENT YES POOL

150.00 ETH

CURRENT NO POOL

20.00 ETH

On-chain Verification Rules

If the developer completes this milestone, the AI Agent will verify the following criteria via RPC before resolving the market.

1 Verified Mainnet Deploy

Sourcify API — bytecode match. Binary: Yes/No.

2 Protocol Fees → Treasury

balanceOf(immutableTreasuryAddress) must increase.

3 Time-weighted ETH locked

Snapshots totalLocked over 14 days to prevent Flash Loans.

Stake on Outcome

Buy tYES

Odds: x1.13

Buy tNO

Odds: x8.50

INVESTMENT AMOUNT

235

ETH

Protocol Fee (0.1%): 0.2350 ETH

Est. Payout: 256.1620 shares

CONFIRM TRANSACTION

Market-Based Milestone Voting

Based on the KPI Verifier's binary outcome, the AMM smart contract automatically executes the final financial settlement.

- If KPI MET: The Treasury releases the final grant tranche to the developer, and YES-voters claim their profits.
- If KPI FAILED: The grant is slashed, and remaining Treasury funds are refunded to NO-voters. No human intervention required..

UMIA SCORE

Dimensions

Uniqueness

93 ^

Problem Novelty

95 The project identifies a new problem space by focusing on 'earned reputation as a fundable primitive,' which is distinct from traditional grant applications or hackathon leaderboards. This redefines how developer reputation can be leveraged for funding.

Ecosystem Saturation

85 While existing tools offer parts of the solution, ProofFund's comprehensive approach to on-chain reputation and funding creates a new category rather than competing directly. This positions it in an open space within the broader ecosystem.

Solution Differentiation

95 ProofFund differentiates itself by integrating AI-enforced execution evidence, market-governed capital allocation, live ENS reputation state, and programmatic treasury release. No existing tool chains all four of these elements together, creating a unique offering.

This project introduces a highly novel approach to funding, establishing a new category around earned reputation as a fundable primitive. Its unique combination of AI-enforced execution evidence and market-governed capital allocation sets it apart from existing solutions, addressing a clear gap in the ecosystem.

Fund the Future.
